

Proposal for the Integration of NeuronUP in Our Center

Dear

I would like to explore the opportunity to implement **NeuronUP** in our center to enhance our rehabilitation and cognitive stimulation services. NeuronUP is a specialized platform that enables professionals to conduct cognitive assessment and deliver highly customizable cognitive stimulation and neurorehabilitation exercises. It also provides tools to plan and measure intervention results remotely, allowing us to offer more personalized care to our patients.

These are some of the main benefits that NeuronUP would bring to our center:

1. **Personalized intervention:**NeuronUP offers a comprehensive library of customizable exercises classified by organized by cognitive domain. This will allow us to provide more effective, individualized therapy and improve user engagement.
2. **Efficient time management:** The platform's sessions and tools will save us valuable preparation time, enabling us to dedicate more attention to direct patient interaction.
3. **Innovative digital tool:** Incorporating NeuronUP positions our center as a forward-thinking facility that embraces technology to improve patient outcomes.

Numerous institutions, such as **Sanitas, Sanofi, and Ruber**, already trust NeuronUP to enhance their services and achieve outstanding results.

How NeuronUP Helps:

María José Zambrana Rodríguez, Neuropsychologist at *Centro Psicosanitario Galiani*, highlights that: "NeuronUP gives us the ability to have full control over the patient's performance in each of the activities carried out. This allows us to maintain direct communication and have a complete results report to rely on when measuring their progress."

Jose Segura Navarro, Neuropsychologist at *Ateneu Maestrat*, emphasizes that: "NeuronUP has made our daily work much easier, as it allows us to adjust task complexity and monitor results, as well as prepare and schedule sessions in advance, and work remotely with people who cannot attend the center."

For **Susana Delgado**, Director of Care at *Caser Residencial*: "The integration of NeuronUP into our centers represents a major advancement in cognitive stimulation, providing our professionals with a versatile and effective platform to improve the quality of life of those we care for."

By adopting NeuronUP, we will be able to offer unique, high-quality cognitive evaluation and neurorehabilitation services that set us apart from our competitors. It also positions us as an **innovative center** that prioritizes patient care by investing in the best tools available. Moreover, NeuronUP's subscription plans provide a **viable and cost-effective long-term solution**. After the first few months, I will share insights on the platform's impact on patient progress and overall results.

I would be delighted to discuss this opportunity in more detail and answer any questions you may have.

Thank you for considering this valuable addition to our center.

Best regards,
